

# Windows Server Containers and DSC

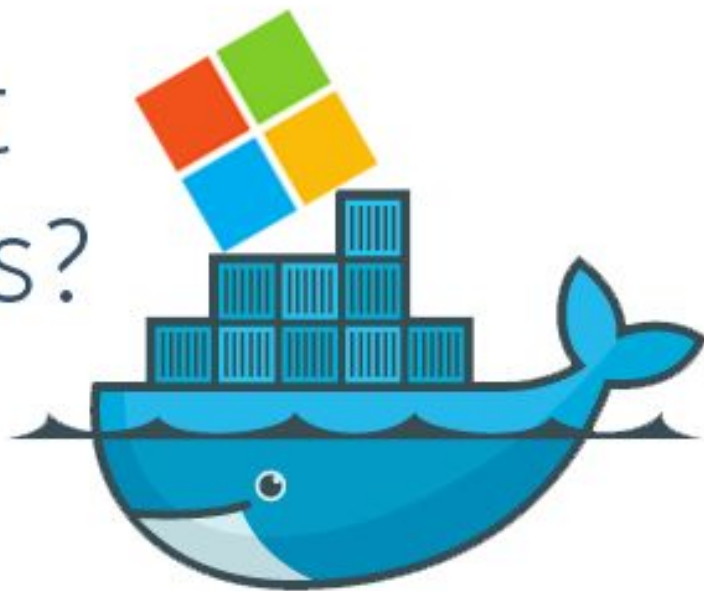

whoami

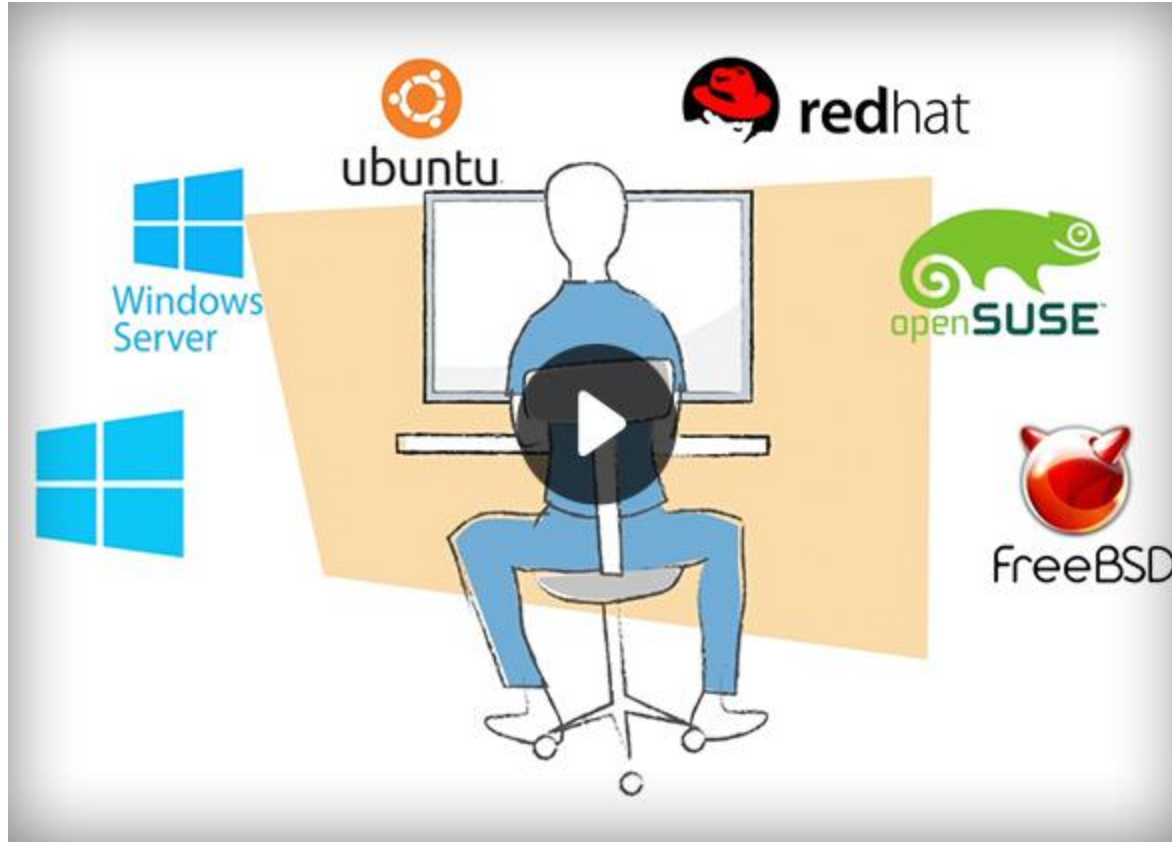

The goal:

To allow devOps teams to deploy their Application/API on a live running system within seconds of commit.

perfect  
strangers?

# Server OS virtualization 2006 - 2016

Server virtualization mentality:

Here's everything, i'm sure within this stuff is exactly what you need somewhere.

Container mentality:

Here's the bare essentials, tell me what you need.

- Own Firewall
- Own NIC
- Shared Kernel

500:8080

ASP.NET

81:80

83:8000

How we achieve our goal

The idea:

Github repositories are the one source of truth and define the *complete* layout of your Application/API.

```
version: '2'

services:
  web:
    build: ./web
    networks:
      - new

  worker:
    build: ./worker
    networks:
      - legacy

  db:
    image: mysql
    networks:
      new:
        aliases:
          - database
      legacy:
        aliases:
          - mysql

networks:
  new:
  legacy:
```

Example:  
Using docker  
compose to define the  
complete layout of a  
container and its  
associated  
environment

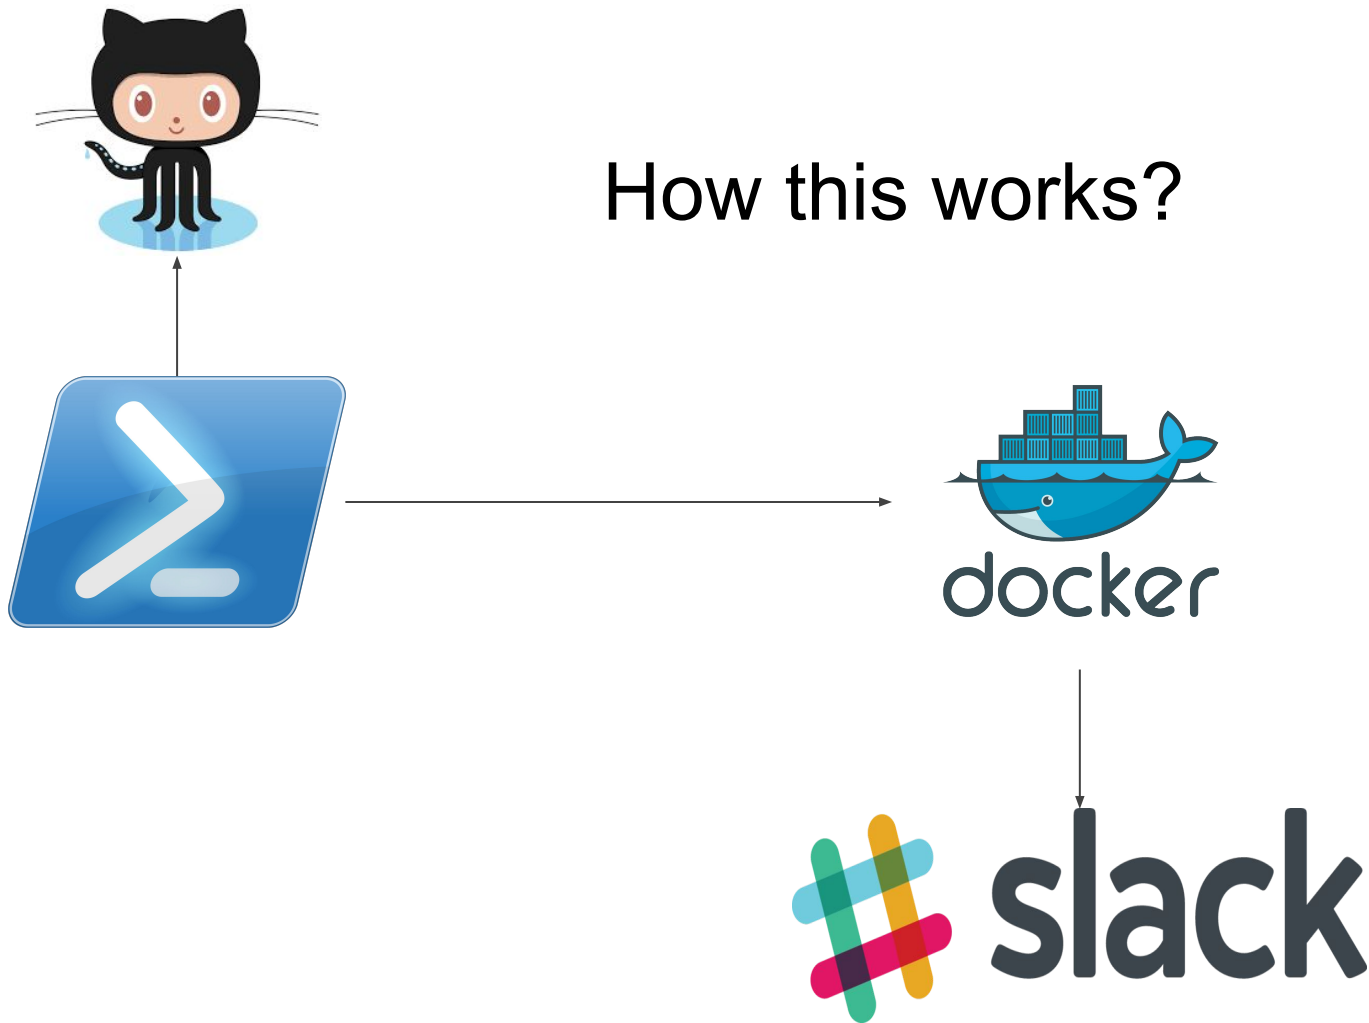

# Our Desired State is the current version number of the Dockerfile on Github. If that changes the container should rebuild.

15 lines (9 sloc) | 371 Bytes

[Raw](#)[Blame](#)[History](#)

```
1  #Define the base image we'll be building everything else off of...
2  FROM microsoft/sample-golang:windowsservercore
3
4  #Give it a label
5  LABEL Description="DevGOApp" Vendor="bundyfx" Version="1.7.5"
6
7  #
8  #These files and folders will be imported into the docker image and be available for us to use.
9  #
10
11 ADD /webserver.go /go/src/webserver.go
12
13 CMD go run C:\go\src\webserver.go
14
```

How this works?

```
11 node ("localhost")
12 {
13     ContainerDeployment 'WebContainer' {
14         ContainerName = 'webdev'
15         PortMapping = '86:80'
16         ProjectRootPath = 'C:\git\iis'
17         ContainerImage = 'mywebapp'
18         ProjectType = 'iis'
19         SlackWebHook = "$SlackWebHook"
20         GitProjectURL = 'https://github.com/bundyfx/ContainerDeployment.git'
21         Ensure = 'Present'
22     }
23     ContainerDeployment 'DevGoContainer' {
24         ContainerName = 'godev'
25         PortMapping = '88:8000'
26         ProjectRootPath = 'C:\git\golang'
27         ContainerImage = 'mygolangapp'
28         GitProjectURL = 'https://github.com/bundyfx/ContainerDeployment.git'
29         SlackWebHook = "$SlackWebHook"
30         ProjectType = 'sample-golang'
31         Ensure = 'Present'
32     }
33 }
34 }
```

# Demo
